

Central Vacuum Systems

You want to clean your home or business in a **healthy, efficient, hygienic** and **environmentally friendly** way.

You want to do it **quickly** and **easily**.

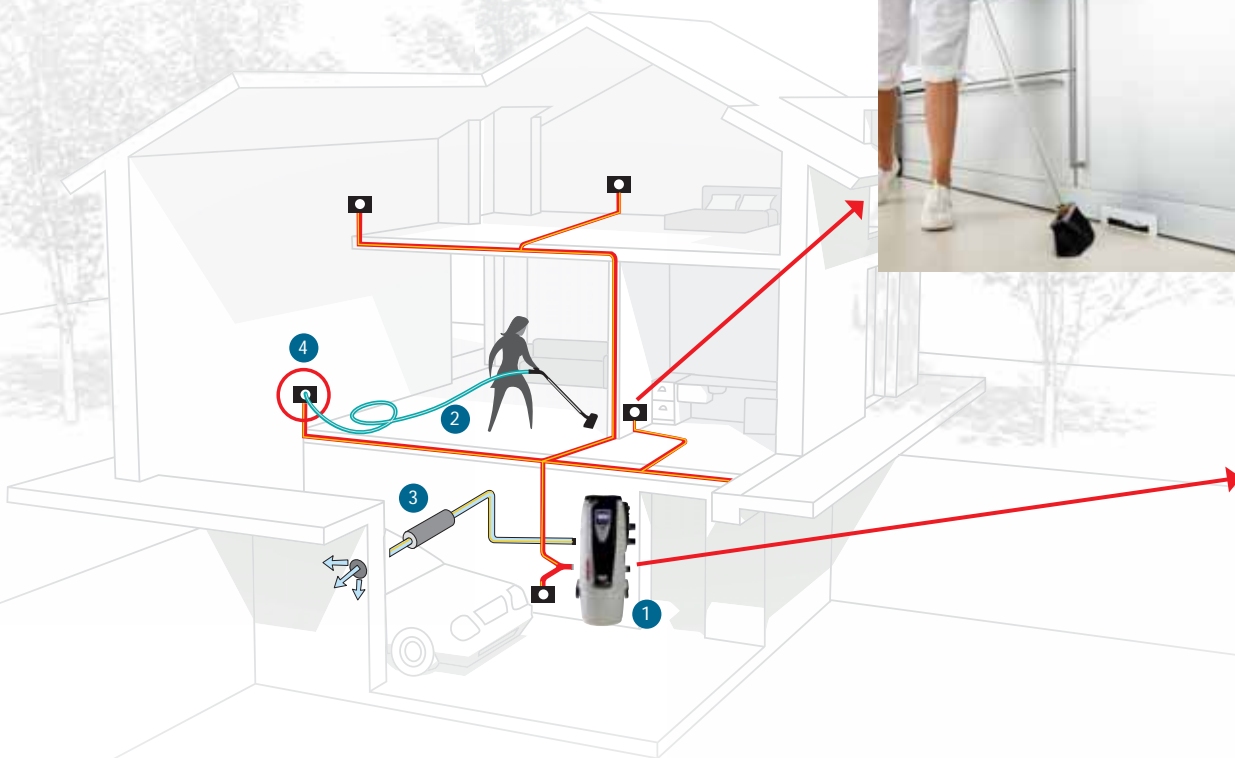

You want your vacuum cleaner to be **ultra reliable, safe, versatile, quiet**, and have **high performance**.

You also want it to be **economical** to buy and operate.

The solution then is to use the **innovative vacuum cleaner range** from **Sistem Air**.

Sistem Air Central Vacuum Systems

Improve the quality of the air in your home or business, make the air better, make your health and your life better. Most conventional vacuum cleaners blow small particles of dust into the air all around the areas being cleaned and often create unpleasant smells. This doesn't happen with Sistem Air central vacuum systems, which means the air is cleaner and healthier which is particularly beneficial to allergy sufferers.

Sistem Air, a brand which is your guarantee:

The **Sistem Air Group** is an established international company based in the industrial heart of Italy, with 8 subsidiaries in Europe. Sistem Air products sell in 30 countries world-wide and have an excellent reputation for quality and service in each of them.

Sistem Air is focused on introducing the many benefits of central vacuum cleaning systems world-wide and achieve this through a dynamic customer focused business culture and innovative design and manufacture.

A dedicated commitment to **Research** and **Development** is what keeps this company ahead. The result of this innovation focus, is a broad range of reliable and durable high quality central vacuum products at very competitive and affordable prices.

... innovation leader
world-wide

100% European design and manufacture
being produced in modern factories in Italy.

Why choose Sistem Air?

- Excellent cleaning performance
- Higher performance means deeper cleaning than conventional vacuum cleaners
- The air from the cleaner is not expelled into the room but is ducted outside
- Even small particles of dust are expelled, which reduces the challenges to dust allergy sufferers and creates a healthier environment in your home or business
- The reduction of microdust is especially beneficial in passive houses or energy saving homes with heat recovery ventilation because the air filters stay cleaner for longer.
- Cyclonic filtration
- No need to carry the cleaner up stairs or have long trailing electrical cables, all you need is the Sistem Air light weight suction hose. Ideal for anyone with limited mobility
- Silent operation. The vacuum motor is located in a cellar or garage, even in a cupboard, a utility room or under the stairs.
- Innovative...Economical....Efficient.....Reliable....Affordable.

A central vacuum system consists mainly of the following elements:

- a central unit, which can be installed in a technical room, in the cellar or in the garage
- a piping system, which is placed in the wall or in the false ceiling
- the inlets, where the hose is plugged-in
- and the hose with several accessories.

- HYGIENIC
- SAFE
- SILENT
- COMFORTABLE
- COMPLETE
- VERSATILE

... all in a unique system

SISTEM AIR offers a complete product range for domestic, commercial and industrial use.

SISTEM AIR produces the complete installation package and a host of accessories including wet systems and the revolutionary Flisy wireless control nozzle.
